

KIRLIAN PHOTOGRAPHY

in conjunction with UMH water purification

In this test, the test subject's hand was placed on a Kirlian device to measure the field radiation of electricity (corona) emitted by the tips of their fingers.

Before:

After:

Above: the test subject's corona.

Below: the same person 10 minutes after having drunk 2 cups of energized water which was prepared using a UMH stand appliance. The corona is much stronger, clearly showing that energy has been strongly absorbed.

The measurements were carried out by Mr and Mrs Pöck of 'Biomed Instruments', Villach.
