

Specifically for FOR UV REGENERATION

UMH UV

WATER IN SPRING WATER QUALITY.

With UMH UV, UMH specifically provides a possibility to reverse any damaging effects of UV radiation on the frequency spectrum of UV-treated water. The device is made of brass and is equipped with a special gemstone composition. Additionally, the inside of the device provides a hyper-

bolic flow cycle and handmade borosilicate glass vials for a highly stable energy field that is geared specifically for UV-treated water. This built-in device is an important addition to our UMH Master Series if your water is UV treated.

RANGE OF USE

- Filter Systems
- Main water supply

WARRANTY

- 5-year warranty on function and device technology
- 5-month money-back guarantee for unsatisfactory effectiveness

ADAVANTAGES

- Regeneration of the UV-C frequencies
- Reconstruction of water structure induced by UV-C frequencies
- No electricity, no chemicals, no magnets
- Maintenance-free

»Water is life,
but only if it's alive.«

Dr. Kohfink

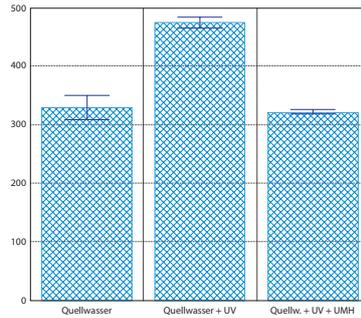

UMH CONVINCES.

The advantage of „UV germ killing“ should be that the DNA of viruses and bacteria is destroyed in the water and thereby solves the contamination problem in the water. Simultaneously, this means that the UV light massively damages the frequency spectra of the water so that its function control in human metabolism cannot be exercised correctly. Also the human DNA-line is successively changed by UV-irradiated water, so that it may cause issues in the immune system and in overall health. There is also the risk that the encoding of the information for the subsequent gene product (protein and enzyme) no longer functions optimally.

The pioneer of water research, Viktor Schaubberger, stated that if we constantly drink sterilized water, the same processes have to take place in our bodies as they have been brought about in the sterilization process of water.

With the help of the electroluminescence method, the inventor of the biophoton analysis Dr. Fritz Albert Popp, could for the first time in December 2003 demonstrate that the UV-irradiation critically degrades spring water. The deterioration in water quality occurs in the physical-biological energy information system of the water.

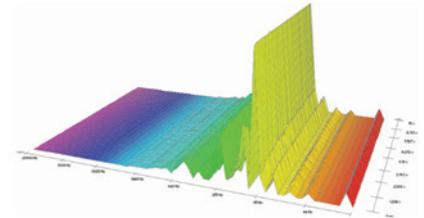

This circumstance allowed Prof. Fritz Popp to prove his „electroluminescence“ report from 22.12.2003 for the first time.

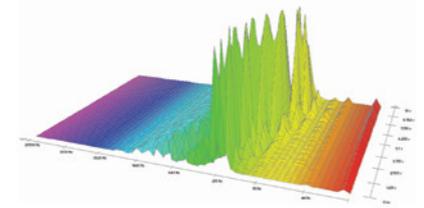

ELECTROLUMINESCENCE

The enormous deterioration in source water quality following UV treatment has also been clearly proven by Dr. Kohfink from Munich with his “Exahertzmultimeter” (ultrahigh frequency) and radionic measurements.

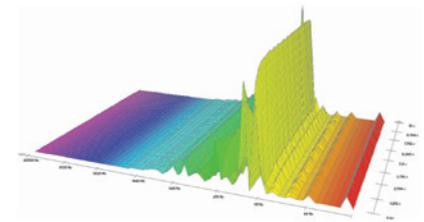

In the laboratory study of „Planet Diagnostic“, which was conducted in Switzerland, bio-frequency analysis also showed a very negative influence on the frequencies of water and thus its energy-biological quality.

FREQUENCY IMAGE OF SPRING WATER: CLEARLY STRUCTURED

FREQUENCY IMAGE OF UV-TREATED TAP WATER

FREQUENCY IMAGE AFTER UMH-VITALIZATION

Using the newly developed UV-neutralizer allows for the light information deficit of UV-treated tap water, to be vitally balanced again, even revitalized.

Bernhard Ratheiser, UMH
