

UMH-SANGO - Remineralisation filter for osmosis systems

TECHNICAL DATA:

Length in mm: (without John Guest)	255
Diameter in mm:	56
Flow rate litres/min:	3 litres
Connections with JG connector:	1/4"
Shelf life of the granules:	ca 2 years
Weight in grams:	500
Sango filling weight in grams:	330

- The UMH remineralisation filter enriches osmosis water with minerals and osmosis water with minerals and trace elements and thus enables thereby enabling optimum subsequent energisation.
- Increases the pH value of the water and enriches it with natural calcium, magnesium and a further 70 trace elements. This improves the energisability and above all the cell availability of the treated water. water significantly.
- Simple installation directly after the osmosis system with John Guest connections
- **This is followed by the installation of the UMH Pure device**
